INCIDENT READINESS ASSESSMENT

In the event of a successful cyber attack, would your organization have the capability to promptly detect the breach and respond effectively?

Bridge the Gap
Identify gaps between existing security measures and best practices, ensuring that your security posture aligns with industry standards and regulations.

Optimized Resource Allocation
Calling attention to areas that require additional resources allows you to allocate budget and manpower more effectively to improve incident response capabilities.

Faster Response
Improve incident detection time by pinpointing key risk indicators of compromise and having a well-managed program.

Engagement

The assessment reviews the following:

- Discovering how prepared your organization is for a cybersecurity incident.
- Evaluating the incident response team, including employees, vendors, legal representation, and insurance coverage.
- Reviewing the plans and processes in place to respond to a cybersecurity incident.
- Evaluating the technical controls in place to prevent and/or detect cyber incidents.

Follow Up

- User-friendly report that clearly presents findings and provides recommendations to secure your organization.
- Executive summary that organizes findings by priority, allowing you to tackle the most critical items first.
- Consultants provide expert guidance to determine appropriate steps for addressing results before, during, and after engagements.
- Share information, receive final reports, and get access to your personalized Action Plan in our free Action Tracking module of TRAC.
