NETWORK SECURITY AUDIT

Identifying and remediating a vulnerability before a hacker can exploit it will keep you in the cybersecurity winner's circle. Advance your penetration testing program to include a strategic combination of tests that simulate real world attack vectors.

Multidirectional Testing

Protect your network from every angle with a comprehensive combination of testing services. These services replicate real-world scenarios and examine the various pathways through which information enters and exits your network.

Cyber Advocates

Our team's ability to effectively communicate complex security concepts in a clear, relatable manner is a game-changer. Get more than just technical expertise; you get a cybersecurity advocate who connects, educates, and empowers your team.

Understandable, Clear Results

Get testing results that aren't just numbers and technical jargon. Expect straightforward, easy-to-understand insights and recommendations that empower you to make informed decisions with confidence.

Engagement

- External network penetration test
- Internal network penetration test
- Credentialed internal network vulnerability assessment
- Social engineering- phishing assessment and telephone impersonations
- Firewall configuration review
- Remote access review
- Email and spam filtering system review
- Internal network security posture review

Follow Up

- User-friendly report that clearly presents findings and provides recommendations to secure your organization.

- Executive summary that organizes findings by priority, allowing you to tackle the most critical items first.

- Consultants provide expert guidance to determine appropriate steps for addressing results before, during, and after engagements.

- Share information, receive final reports, and get access to your personalized Action Plan in our free Action Tracking module of TRAC.
